Catalogue

January 2024

These programs cover over 40 years of railroad videography. Standard Definition material was mastered on VHS and DVCAM as well as broadcast quality tape formats. High Definition material was digitally mastered at 1920x1080. I've also included some 16mm film from the 1970s, some of it shot by Norm Blackwood. Each program comes with log notes listing dates, locations, motive power and where possible, the names or symbols of trains. In addition, locations and dates are superimposed over the first scene of each location. There is **No Narration** and **No Music**. Each program is a chronological composite of footage, shot between the 1970s and May 2019. Locomotives, cabooses (if any), and major portions of the trains are presented.
